

The Glycaemic Index Of Common Foods

Foods only appear on the GI index if they contain carbohydrate. This explains why you won't find foods like fresh meat, chicken, fish, eggs and cheese in GI lists. However, you may find some processed foods like sausages or chicken nuggets in a GI list because they contain flour! Foods that raise blood sugar quickly have the highest score. It is the overall balance of each meal and each day that is important. Having a jacket potato with baked beans, for example, will lower the GI value of that whole meal.

Ideally each meal or snack should be mainly composed of foods with a **low score (54 and below)**. Meals and snacks composed of only high scoring foods are best avoided. i.e. Lower numbers preferred – this gives a slower release of energy. If you want to lose weight, you'll also need to watch your portion sizes.

GRAINS & GRAIN PRODUCTS

French baguette	95
White rice	72
Bagel	72
White bread	70
Wholemeal bread	69
Ryvita	69
Crumpet	69
Brown rice	66
